## Connecting The Way You Live

The ConnectionCenter™ Basic Series delivers a structured wiring foundation that is essential for reliable data, audio/video, and telephone distribution in today's homes.

For builders and homeowners who are looking for an entry-level system with unlimited expansion capabilities, the ConnectionCenter Basic Series is the perfect solution. Each system provides reliable telephone and audio/video distribution throughout the home. And with a plethora of available options, the Basic Series can be upgraded to provide additional services, such as ethernet, whole-home security systems by GE Interlogix, or amplified video.

Perhaps the most unique characteristic of this series is its modular framework that was created to support both current and future home technologies. As technology advances and a family's needs change, the full potential of the system can be unlocked by simply inserting new modules.

Unlike other structured wiring systems, our Basic Series (3-3/4" depth) can be upgraded easily and cost effectively. To upgrade to our premium series (4-3/4" depth), simply add a trim-ring, a door, and the module and server panels—no parts to throw away.

The ConnectionCenter™—Basic Series

### Technically Sound. Unlimited Potential.

#### **Quality Construction**

*The GE Smart ConnectionCenter has quality and style built in. Experience fewer costly callbacks, happier customers, and peace of mind.*

#### **Modular Design**

*Upgrading or reconfiguring a system is as easy as snapping in or replacing modules. The roomy, stylish enclosure allows easy migration to added functionality. The system grows with the family.*

#### **Modular Bays**

*The metal strips between module bays can be twisted out to allow double or larger sized modules to be installed. These are the only modular bays available in the market today.*

#### **Flexible Mounting Slots**

*The mounting slots in the side of the ConnectionCenter box are flexible and adjust automatically to meet the contour of the studs during the "rough-in" installation. This allows the ConnectionCenter box to maintain its form in spite of being tightly anchored to imperfect or warped studs.*

#### **Advanced Design Features**

*The ConnectionCenter basic series uses patent-pending wire/cable management and module mounting designs to provide optimal wire performance, ease of installation and ease of service. Upgrading or reconfiguring a system is as easy as snapping in or replacing modules. The roomy and well designed enclosure allows easy migration to added functionality. The system can grow with a family's needs.*

# Building A ConnectionCenter™—Basic Series

The modular design of the ConnectionCenter product line makes building a system simple. Select from preconfigured systems or easily customize systems to meet the needs of your customers.

The tables below lead you through the process of customizing a system. Try designing a system today for a current (or future) project—you'll enjoy the simplicity of the well-designed, modular ConnectionCenter systems.

## Selection 1

### CONNECTION CHOICES

Connection Options	Size	Model
4 Video, 7 Telephone, and 5 Ethernet*	20" / 37"***	400
8 Video, 13 Telephone, and 8 Ethernet*	37"	800
15 Video, 19 Telephone, and 11 Ethernet*	37"	1600

\*Ethernet Hub included in Gold System. Actual connections may vary depending on final system configuration.

\*\*In the 400 model, the 37" is available in the Bronze System only.

## Selection 2

### CONNECTION CHOICES

Model Options	System
Telephone and Passive Video	Bronze
Telephone and Amplified Video	Silver
Silver plus Ethernet Switch	Gold

## Selection 3

### MODULE CHOICES

• 6-Port Telephone KSU Module	• 1x16 Video Amplifier	• 3x4 Multiswitch
• 6-Port Telephone Interface Module	• 1x8 Video Amplifier	• Power Distribution Module
• 7-Port Telephone Distribution Module	• 4x1 Video Combiner	• Power Supply -1.3 Amp
• 1x4 Video Amplifier	• 5-Port 10 BaseT Ethernet Switch	• Power Assembly
• 1x4 Video Splitter	• 5-Port 10/100 Ethernet Switch	• Internet Gateway/4-Port Router
• 1x8 Video Splitter	• 8-Port 10/100 Ethernet Switch
